$\qquad$

DEFINITIONS: Give the word or term that this definition describes.(2pts each) (30pts)

1. Two vowels that form one sound. Examples: ov, $\varepsilon v$, ot
2. The vowel that appears in between a stem and a case ending.
3. Changes that occur in a word's spelling in order to change its meaning.
4. Verbs whose lexical forms end in $-\alpha \omega-\varepsilon \omega$ or $-o \omega$ which affect the spelling of the ending attached to it.
5. Verbs whose lexical form appears to be middle (in form) but have an active meaning.
6. The three positions an adjective can take. First, the position of description, second, the position of acting like a noun, third, the position of "is" adjective or equation.
7. The three kinds of accents and what they look like.
8. Words that indicate position, or a relation between two nouns.
9. The case indicating the subject of the sentence.
10. The case usually indicating the object of the sentence.
11. The case of "of-ness" or "from-ness." Translation word: of.
12. The case of "to-ness" or "with-ness." Translation word: to, in, or with.
13. The only mood we have yet learned. It is the mood of statement, or declaration.
14. The voice that indicates the subject is doing the action of the verb.
15. The voice that indicates the subject is receiving the action of the verb.
